INTRODUCTION

History

Sage Coin is the innovation of its founder, Royal T Griffith El, and its founding company, Sirius Sage. Sirius Sage has been serving the community of Art & Culture as a brick and mortar retail store with online retail components since 2018. The company is founded upon the ancient principles of Maat; truth, justice, righteousness, reciprocity, harmony, order, and balance. It is these principles that have led to the successes embodied by the Sage Coin.

Intent

At its inception Sage Coin was conceived in order to bring the principles of Sirius Sage into the world of Web3. Initially it began its development in conjunction with a corresponding project of non-fungible tokens created by the Sirius Sage team, now known as Sirius Sage Meta. The coin was designed as an incentivizing utility for the project in the form of redemptions and pooling.

Purpose

Sage Coin now serves as a intermediary instrument comparable to other tokens on the Ethereum blockchain in its capacity to be exchanged for any other digitally encrypted decentralized medium. Having been created with Solidity coding it was written based on ERC20 standards further establishing its transferable nature. Sage Coin users will be able to take advantage of commercial and cultural benefits based on their ownership of the coin.

APPLICATION

Retail

Holders have the option of acquiring goods and services by using their tokens on the Sirius Sage retail website. The Sirius Sage Meta team has taken measures to ensure the security and convenience of all payments on any of their websites. Crypto payments are made available through MetaMask and Pinwheel. Each transaction is verified manually to provide accurate order execution. Not only for Sage Coin, but users can use any cryptocurrency to make payments.

Web3/NFT

Implementation of of Sage Coin’s Web3 utility entails holders of specific non-fungible tokens being able to visit the Sirius Sage Meta website to make onetime claim of corresponding amounts of Sage Coin based on the tiers of the tokens they hold. Rewards claims are as follows:

- ◆ 4,500 SAGE Total for phase 1 NFTs numbering 24 in total
- ◆ 13,000 SAGE Total for phase 2 NFTs numbering 74 in total
- ◆ 20,000 SAGE Total for phase 3 NFTs numbering 44 in total

Subsequent rewards will be gained passively based on the yield from a liquidity pooling of SAGE and ETH funded by holders and by a portion the proceeds from any fees earned by the team’s stake in the LP. Each transaction in the pool will also earn holders a specific percentage of the fees relative to the percentage of holdings in the pool. The Sirius Sage Meta team will continue to implement more ways to create passive yield for its holders.

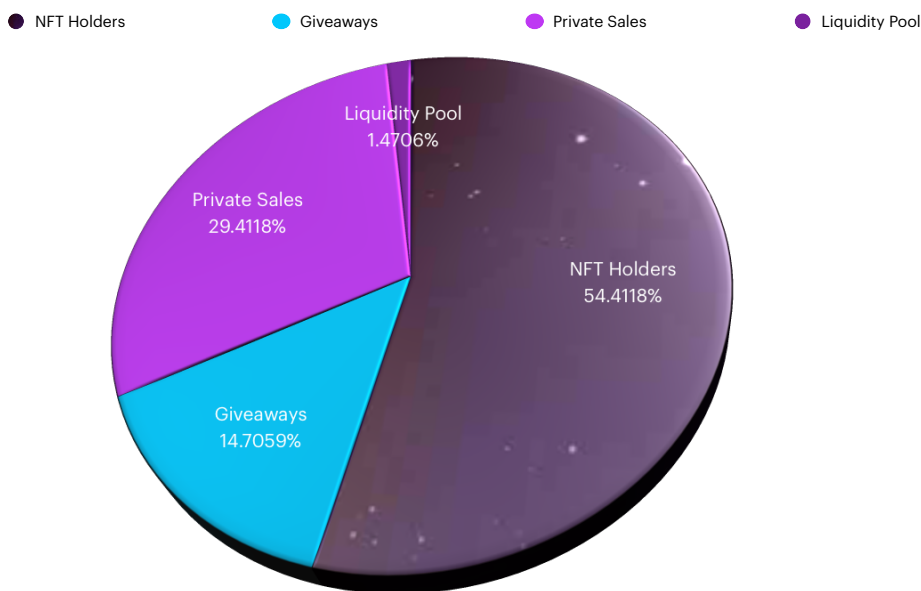

CONCLUSION

Growth

Sage Coin aims to continue its growth through more NFT projects with token redemption as well as integration into relevant technologies. Partnerships, sponsorship, & endorsements are a certain part of the future of Sage Coin. Inquiring partners will be able to receive a press kit and customized arrangements via the contact on the official token website. The public is urged to contribute to the positive impact on the market by participating in the NFT projects which will be used to fund the liquidity of the token.

Issuance

Per the NFT redemptions by the completion of the third phase there will be a total of 37,000 SAGE circulating among NFT holders. Concurrent to this there will be sporadic giveaways via social media. These giveaways will total 10,000 SAGE. Private sales, currently at around 4,000 SAGE, are expected to reach at least 20,000 SAGE within the second quarter 2022. Also the liquidity pool, which currently holds around 280 SAGE & .3974, is expected to reach about 1,000 SAGE & 1.5 ETH within the second quarter of 2022 as well. These figures are an allocation of initial issuance for around 68,000 SAGE, which accounts for about .01% of the total market cap. The remaining circulating supply will be split between various market exchange platforms and the original holder of the token.

*figures represent an estimation of holdings minus exchange markets & original holdings

Sage Coin & Sage The Metaverse projects are set to be equally fun, enlightening, and equitable experiences for both the holders, customers, and for the Metaverse as a whole. The precedence set here will forever impact the Art & Culture of the Web3 world, the internet retail world, and possibly many other worlds and dimensions.
